Software Interfaces 123

throughout an automobile, initially for eliminating the large and expensive wiring harnesses at *Mercedes* (car manufacturer from Germany).

CAN provides standardized communication objects for process data, service data, network management, synchronization, time-stamping, and emergency messages. It is the basis of several sensor buses, such as *DeviceNet* (*Allen-Bradley*), *SDS* (*Smart Distribution System*) from *Honeywell* or *CAL* (*Can Application Layer*) from "*CAN in Automation Group*" (a group of about 300 international users and manufacturers). *CANOpen* is a family of profiles based on *CAN* which was developed within the "*CAN in Automation Group*". The extensive error detection and correction features of *CAN* may easily withstand the harsh physical and electrical environment presented by a car.

3.2.2.3 *DeviceNet*

DeviceNet is an extension of *CAN* adapted for critical factory networking purposes. At the next level are the "*control*" networks, which include *ControlNet*, developed by *Allen-Bradley* and also utilized by *Honeywell*, overlapping with some of the functionality provided by *Profibus-FMS* (*Fieldbus Message Specification*). *Profibus-FMS* uses the same physical layer as *Profibus DP* (*Decentralized Peripheral*) but allows multi-master, asynchronous, peer-to-peer communication. *FMS* and *DP* can operate simultaneously on the same network. *ControlNet* was conceived as the ultimate high-level fieldbus network and was designed to meet several high performance automation and process control criteria. Of primary importance is the ability to communicate with each other being 100% deterministic, while achieving faster response than traditional master/slave poll/strobe networks.

Furthermore, *DeviceNet* is a simple, open networking solution that reduces the cost and time required to wire and install industrial automation devices, while providing interchangeability of components from multiple vendors. *DeviceNet* is a cost-effective solution for low-level industrial device networking and an effective way to provide access to the intelligence present in those devices. A *DeviceNet* network lets the user/programmer connect devices directly to shop floor controllers without hard-wiring each device into an I/O module. It is also used to:

- Reduce wiring and installation cost
- Reduce start-up time
- Significantly reduce downtime and the total cost of ownership with the aid of diagnostics, Auto Device Replacement, and other time- and cost-saving features
- Support standard and safety applications on the same wire
- Benefit from an open network
- Control, configure, and collect data on a single network

Consequently, using a fieldbus is not significantly different if compared to regular IO, since the same logic of encoding commands and parameters is used, utilizing

1763.9 MB vlr vlr is a tool which transfers the whole vlr.c/1 into a.web extension. This is what we use to migrate stuff to vlr. It's really easy and it's only available on our download page, the client for it can be found here. Automatic Vlr migration Plugins for vlrwebdvr Downloads A FLAC plugin, which will convert FLAC files into vlr Release History vlrwebdvr v3.0 - Added some new features, fixed and improved the gui to adapt better to a laptop-screen - Added some new features, fixed and improved the gui to adapt better to a laptop-screen vlrwebdvr v3.5 - A new GUI interface, fixed some bugs and added some new features. - A new GUI interface, fixed some bugs and added some new features. vlrwebdvr v3.5.3 - Added some small features, changed the interface a little bit and some code - Added some small features, changed the interface a little bit and some code vlrwebdvr v3.5.4 - Added support for the rips with VOR tags from AVI file formats (avi, m2v, m4v) - Added support for the rips with VOR tags from AVI file formats (avi, m2v, m4v) vlrwebdvr v3.5.5 - Added a new tool for the upload function (Downloads -> Upload vlr -> Uploaded tracks), fixed some bugs and added some new features - Added a new tool for the upload function (Downloads -> Upload vlr -> Uploaded tracks), fixed some bugs and added some new features vlrwebdvr v3.5.7 - Fixed all bugs which were found - Fixed all bugs which were found vlrwebdvr v3.5.8 - Fixed the software encoding process, added better error handling (try to free memory before error), added better logging, fixed all bugs - Fixed the software encoding process, added better error handling (try to free memory before error), added better logging, fixed all bugs vlrwebdvr v3.5.9 - Fixed all bugs - Fixed all bugs vlrwebdvr v3.5.10 - Fixed all bugs - 82157476af
